Occurrence and Community Impacts of Per- and Polyfluoroalkyl Substances in North Carolina

Detlef Knappe

Department of Civil, Construction, and Environmental Engineering

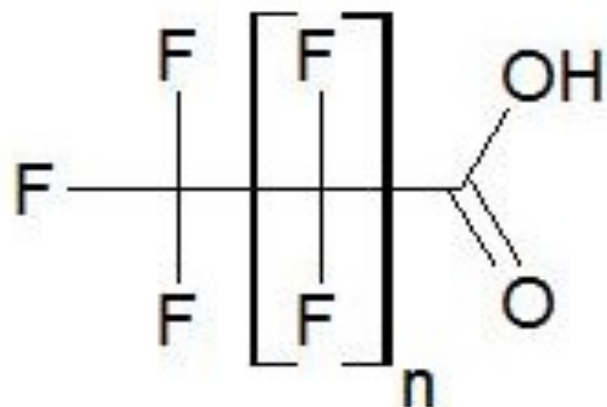

NC State University

knappe@ncsu.edu

University of Kentucky – November 18, 2021

Perfluoroalkyl acids are organic compounds in which all C-H bonds are replaced with C-F bonds.

Long-chain PFASs:

PFCAs: $C_n F_{2n+1} COOH$, $n \geq 7$

PFSA: $C_n F_{2n+1} SO_3H$, $n \geq 6$

Polyfluoroalkyl acids contain C-F bonds and at least one C-H bond.

- Perfluorooctanesulfonate (PFOS)

Perfluorinated
(no C-H bonds)

- 6:2 Fluorotelomersulfonic acid (6:2 FtS)

Polyfluorinated
(contains C-H bonds)

PFASs are released into the environment by:

fluorochemical manufacturing processes, and

the production, use, and disposal of products containing PFASs

- Non-stick coatings

- Grease- and oil-resistant coatings for paper products

- Water repellent fabrics

- Stain-resistant coatings for fabrics, carpets, and leather

- Firefighting foams

PFASs: Useful, but “forever chemicals”

PFAS properties:

- Very strong covalent C-F bond
 - Persistent in the environment
 - Persistent in most engineered treatment systems
- Surfactant behavior
- Some PFASs bioaccumulate
- Other PFASs are very mobile
- PFASs are ubiquitous
- Adverse health effects

The PFAS class includes many sub-classes and thousands of individual compounds

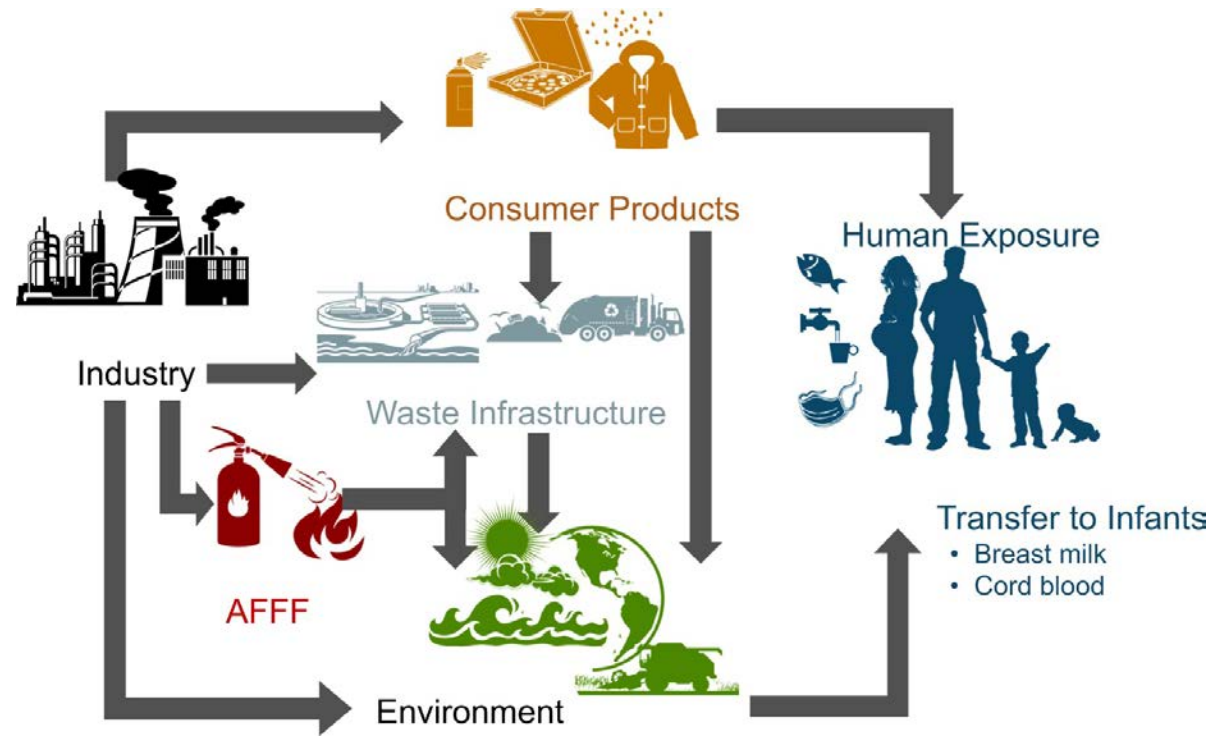

Sub-classes of PFASs	Examples of Individual compounds*	Number of peer-reviewed articles since 2002**

- PFAS have been commercially produced since the 1950's
- > 3,000 may have been on the global market
- > 5,000 named on the EPA master list

Human Exposure and Health Effects

- PFOS, PFOA, PFNA and PFHxS are widely detected in people globally
- PFOS and PFOA are “likely carcinogenic” (US EPA, 2016) and immunotoxic to humans (US DHHS, 2019)
- Health effects associated with exposure to many other PFASs are poorly understood

Sunderland et al., 2019, Nature

Drinking water guidelines/standards for PFASs are designed to limit exposure

Updated Apr 24, 2018 at 6:37 PM

Soon after DuPont started making C8 at Fayetteville Works, the chemical turns up in a well under the plant. The public wouldn't find out for another two years.

The public has many questions

- Are PFAS in my drinking water? Are PFAS in my water that standard methods do not detect?
- Are PFAS in me? At what levels? What are the health effects?
- Are PFAS in the fish I catch? The food I grow in my garden?
- How can I get PFAS out of my water?

NC Legislative Mandate: 2018 Appropriations Act (S99; SL 2018-5)

FUNDING TO ADDRESS PER- AND POLY-FLUOROALKYL SUBSTANCES, INCLUDING GENX/USE OF EXPERTISE AND TECHNOLOGY AVAILABLE IN INSTITUTIONS OF HIGHER EDUCATION LOCATED WITHIN THE STATE

SECTION 13.1.(f) The General Assembly finds that (i) per- and poly-fluoroalkyl substances (PFAS), including the chemical known as "GenX" (CAS registry number 62037-80-3 or 13252-13-6), are present in multiple watersheds in the State, and impair drinking water and (ii) these contaminants have been discovered largely through academic research not through systematic water quality monitoring programs operated by the Department of Environmental Quality or other State or federal agencies. The General Assembly finds that the profound, extensive, and nationally recognized faculty expertise, technology, and instrumentation existing within the Universities of North Carolina at Chapel Hill and Wilmington, North Carolina State University, North Carolina A&T State University, Duke University, and other public and private institutions of higher education located throughout the State should be maximally utilized to address the occurrence of PFAS, including GenX, in drinking water resources.

Long chain fluoroalkyl ether acids in Wilmington blood

1. Nafion byproduct 2 (99%)

2. PFO4DA (98%)

3. PFO5DoDA (87%)

Blood concentrations of newly identified PFAS decreased after six months

Median blood concentration for 44 participants (ng/mL)

The presence of PFAS in NC drinking water sources has operational and financial impacts

- Brunswick County: Installation of reverse osmosis plant
 - Capital cost: \$99M
 - Operating cost: \$2.9M/year
- Cape Fear Public Utilities Commission: Installation of post-filter granular activated carbon adsorbers
 - Capital cost: \$46M
 - Operating cost: \$2.7M/year
- Pittsboro: Started feeding powdered activated carbon
- Greensboro: Temporarily stopped using one of its water treatment plants, evaluating treatment options
- Cary/Apex, Fayetteville: Evaluating treatment options

Whole house granular activated carbon filters are one option to treat private wells

- 2 filters in series
- 200 pounds of activated carbon per filter
- Locked shed on property
- Water pressure and flow can be impacted
