IV. RESEARCH OVERVIEW

I am an implementation scientist with expertise in applying combined determinants and outcomes frameworks, such as iterative PRISM (iPRISM) and RE-AIM to behavioral health interventions in organizational settings. My primary research program focuses on increasing colorectal cancer screening rates among disparate populations (e.g., African Americans, rural Appalachian Kentuckians) in clinical and community sites by matching novel implementation strategies to stool-based colorectal cancer screening interventions. Secondly, I research the implementation of diabetes patient self-management interventions that focus mainly on the mechanisms of peer support, tailored education, and patient needs related to social determinants of health.
