

Your Memories are *Beautiful*

We want to help you protect them with **SMArT-HS**

One in five persons diagnosed with Alzheimer's disease actually have LATE (Limbic associated TDP-43 encephalopathy), formerly known as Hippocampal Sclerosis of Aging. **SMArT-HS** is a phase IIa study to assess the safety and tolerability of nicorandil (currently commonly used for chest pain) in people who are 70 years old or older with memory complaints.

SMArT-HS

Study Procedures and Duration

MRI, physical exam, memory testing, blood work and oral medication

8-10 visits over 2 years
