

Have you or a loved one noticed changes in your memory and thinking?

Diverse VCID is a research study using advanced brain imaging and blood-based techniques to better understand how vascular changes cause brain injury and cognitive decline, especially in racially diverse communities.

You may be able to join if:

- You or a loved one has noticed changes in your memory and thinking
- Your doctor has said there are abnormal white matter changes on your brain MRI
- Taking part in Diverse VCID is up to you. If you join, you can leave the study at any time.

Potential benefits:

- The study will be free to you and you will be reimbursed for participating.
- Your doctor can use the results from your MRI scan and bloodwork to help diagnose and treat your medical conditions.
- Your participation could lead to better care for you. It could also help your family and those in your community with memory loss in the future.

Join us on our journey to improve medical care for people with memory loss.
